

Reporter makes it easy to query your data with the reporting tool of your choice. Your data held in the BeBanjo products is loaded into your own data warehouse in the cloud. Query, slice and dice your data to your heart's content.

BeBanjo products contain a wealth of valuable data about your VoD business: schedules, rights, metadata, publications, jobs...

Reporter is an add-on that lets you easily query your data with the reporting tool of your choice.

The add-on

The BeBanjo products let you produce reports out-of-the-box. These are standard reports that are valuable to most customers. For instance, the Rights Availability report – available out-of-the-box in Movida – lets you find all content for which you have rights available, for a given platform, over a given period.

In addition, sophisticated users want to produce custom reports, slicing-and-dicing their data in creative ways. They want to get detailed insight into their operation, such as:

- "How many hours of original content will I publish next month, platform by platform?"
- "What are the CableLabs Asset IDs for all late deliveries last week?"
- "What's the ratio of subtitled HD jobs with QC problems each month?"

Reporter lets you do precisely that.

Your data, your way

Reporter is based on BigQuery – "Google's fully managed, petabyte scale, low cost enterprise data warehouse for analytics". Your data held in the BeBanjo products (i.e., Movida, Sequence, and Metadata) is loaded by Reporter into your own data warehouse in the cloud.

Query your data with the reporting tool of your choice

The data warehouse is SQL-compliant, and integrates natively with all major reporting and business intelligence tools, such as Tableau, Excel, Qlik or Google Data Studio. The Reporter data model is well documented (e.g., with entity relationship diagrams (ERD)) and the BeBanjo teams can help you build the custom reports of your choice.

Importantly, the Reporter data warehouse delivers reporting performance at scale. Reporter handles today the extensive catalogue of major Hollywood studios. And, operationally, it is nicely decoupled from the main database of your BeBanjo products, ensuring a neat separation of concerns.

With Reporter, BeBanjo customers can find new ways of understanding and sharing the status of their VoD operations:

- creating custom reports
- publishing dashboards to internal teams
- publishing dashboards and reports to external partners, only including the subset of data they should see (e.g., to give an affiliate visibility of the next 6 weeks of upcoming schedules)
- producing massive data extracts in seconds

About BeBanjo

We are an agile company of talented developers, designers and Video On-Demand specialists and we like to take good care of our customers; that is why we focus on making easy to use, easy to learn, collaborative tools that our users love.

We make Video On-Demand operations easier, faster, better, so that our customers are free to concentrate on really running their Video On-Demand business. A wide range of companies successfully operating in the Video On-Demand space already trust us. BeBanjo was founded in 2008 and is part of Arkena.
